

CORRIDOR E2 PLANNING & ROW PRESERVATION STUDY

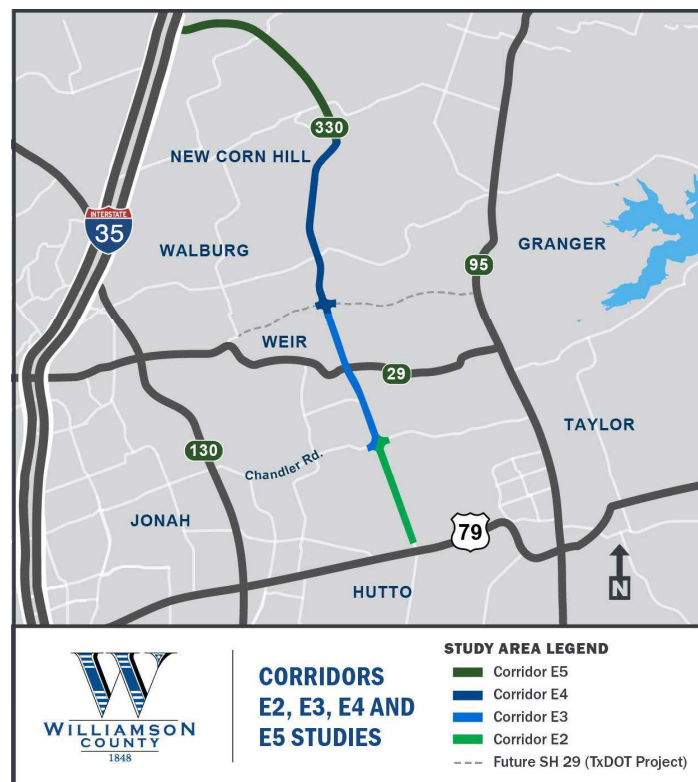

FACT SHEET

Updated September 2022

County Commissioner: Commissioner Russ Boles, Precinct 4
Study Roadway: New north-south alternative to IH 35 from US 79 to Chandler Rd
Study Limits: Approximately 3.6 miles
Engineer: BGE, Inc.

STUDY PURPOSE:

Williamson County is conducting the Corridor E2 Planning & ROW Preservation Study to plan for future growth and to set the right-of-way (ROW) footprint. The road will be built as growth occurs to provide an alternative transportation corridor to IH 35, from US 79 to Chandler Rd on the east side of the county.

WHY THE STUDY IS NEEDED:

County governments are responsible for planning effective transportation systems. Williamson County has experienced immense growth the last two decades and current population projections predict that this growth will continue. In Taylor specifically, the population has grown 46% in less than 20 years, from 13,575 in 2000 to 19,859 in 2019. The Taylor job market has also seen an increase of 3.5% over the last year and future job growth over the next ten years is predicted to be 51.5%. That's 18% higher than the national average! In Hutto, the

population has increased by 110.87% since the most recent census, which recorded a population of 14,698 in 2010. Hutto reached its highest population of 30,993 in 2021.

It is the County's responsibility to plan for current and future transportation needs in order to keep pace with the anticipated increase in residents and vehicles. This high level of growth is inevitable and requires extensive planning that will ultimately protect the safety, mobility and quality of life of the residents of Williamson County.

Preserving the corridor for a future road before development occurs allows the County to be fiscally responsible by working with willing sellers before property values make it cost prohibitive for improvements. Preserving ROW now also minimizes impacts to businesses and homes because the corridor is preserved before more structures are built.

THE STUDY AND PLANNING PROCESS:

The Corridor E2 Planning & ROW Preservation Study is part of the County's Long-Range Transportation Plan (LRTP), which works as a placeholder for a network of roadways that will foster safety and mobility across the county. The location of the Corridor on the LRTP was only conceptual and a subsequent study is needed to determine a feasible and reasonable route. This study is now underway and will examine multiple constraints such as environmental factors, historical factors, home and business displacements, and drainage and waterways, in order to develop a route.

WHAT HAPPENS NEXT:

After gathering feedback from meetings with property owners, the study team conducted further analysis to finalize the best route and the ROW footprint was set. The study team is working on schematic design of the Corridor, which is anticipated to be complete in fall 2022.

If the county continues to grow and funding becomes available, the first frontage road, most likely a two to three lane road, one lane in each direction with a possible center turn lane, would be built. As growth continues to occur and funding is secured, the second frontage road would be built, then the main lanes. Building the ultimate Corridor E2 roadway would most likely take several decades.
